

Module 1 – Overview of IT Industry

1. Write a simple "Hello World" program in two different programming languages of your choice. Compare the structure and syntax.

Ans. C language

```
#include <stdio.h>
```

```
int main()
```

```
{
```

```
    printf("Hello World!\n");
```

```
    return 0;
```

```
}
```

Javascript

```
console.log("Hello, World!");
```

Fetures	C language	Javascript
output	Printf()	Console.log()
library	No library	#include<stdio.h>
Compiler	Node.js	GCC

2. Research different types of internet connections (e.g., broadband, fiber, satellite) and list their pros and cons.

Ans.

Internet connection	Pros	cons
Broadband(Cable)	Very Available Affordable Good for general use	Slow Speed decide on how much between them
Fiber	Fast speed	Expensive

	Use for gaming and streaming	Not use in Genral
Satellite	Available in most Area Provide Wireless connection	Too much Expensiive Not to much hard connectivity

3. Identify and classify 5 applications you use daily as either system software or application software.

Ans.

System Software	Application Software
Windows	Google
Linux	Chrome
Driver	Microsoft Word
Task Manager	Spotify
Android	Instagram

4. Write and upload your first source code file to Github.

Ans.

Step 1. Create a program you like

```
#include <stdio.h>
```

```
int main()
{
    printf("Hello World!\n");
    return 0;
}
```

Step 2. Save The Program In Your Computer's Folder

Step 3. Create a GitHub Repository

- Go to GitHub.
- Click on New repository
- Name the Repository and Choose 'Public' or 'private' and Create Repository
- Copy URL

Step 4. Drag your folder to the repository

Step 5. Check that it is Created.

5. Create a list of software you use regularly and classify them into the following categories: system, application, and utility software.

Ans.

System Software	Application Software	Utility Software
Windows	Microsoft Word	Antivirus
Linux	Instagram	Google Drive Backup
Android	Google	CCleaner

6. Create a flowchart representing the Software Development Life Cycle (SDLC).

Ans.

7. Build a simple desktop calculator application using a GUI library.

Ans.

```
#include<stdio.h>
```

```

int main()
{
    int num1, num2;
    char ch= '%';
    up:
    printf("\n Entre the Number=");
    scanf("%d", &num1);
    printf("\n Entre the Number=");
    scanf("%d", &num2);

    printf("\nPress '+' For addition");
    printf("\nPress '-' For Substraction");
    printf("\nPress'*' For Multiplication");
    printf("\nPress'/' For Division");
    printf("\nPress' %c' For Reminder= ch");

    printf("\nEnter The Formula =");
    scanf(" %c", &'Coice');

    Switch(Choice)
{
case '+':

printf("\naddition of %d and %d is = %d",num1,num2,num1+num2);
break;
case '-':

printf("\nSubstraction of %d and %d is = %d",num1,num2,num1-num2);
break;

```

```

case '*':
    printf("\nMultiplication of %d and %d is = %d",num1,num2,num1*num2);
    break;
case '/':
    printf("\nDivision of %d and %d is = %d",num1,num2,num1/num2);
    break;
case '%':
    printf("\nReminder of %d and %d is = %d",num1,num2,num1%num2);
    break;
}
printf("\nEnter 'y' to continue and 'n' to exit");
scanf(" %c", &choice);
if(choice=='y' || choice=='Y');
{
    goto up;
}
return 0;
}

```

8. Draw a flowchart representing the logic of a basic online registration system.

Ans.
